

EMF Free Wireless Bluetooth Headphones Headsets

Air conduction
technology, with natural
sound and multiple
connection technology

EMF Free Air Tube Wireless Bluetooth Headphones incorporate a hollow flexible air tube, minimising radiation exposure from the phone.

A brand new way of making calls and listening to your favourite content without having your brain being blasted with EMF radiation.

The neckband sits on your neck comfortably while the radiation-free air tubes go up to your ears and give you the best sound experience on any air-tube headset.

When receiving a phone call the neck band vibrates alerting you that there is a phone call. To answer the call simply tap the headset shortcut button.

Features:

- Long battery life: 20 play hours and 200 hours of standby
- Lightweight & comfortable to use: the headset weighs only 42 grams / 0.092 lbs!
- Connect two devices at the same time with Bluetooth V5.0
- AirTube – new premium quality silicon
- Up to 100% radio frequencies shielding
- IPX4 – Protects from splashing water, no matter the direction

Also – you can use your new EMF Free Air Tube Wireless Bluetooth Headphones with any device that has Bluetooth connectivity.

How does it work?

Our Air Tube Wireless Bluetooth headset is based on a patented technology that distances EMF radiation from the head. By using Air Tubes, we distance the radiation from the ear canal.

Bluetooth is emitting EMF; however, our Bluetooth has the lowest EMF emission possible.

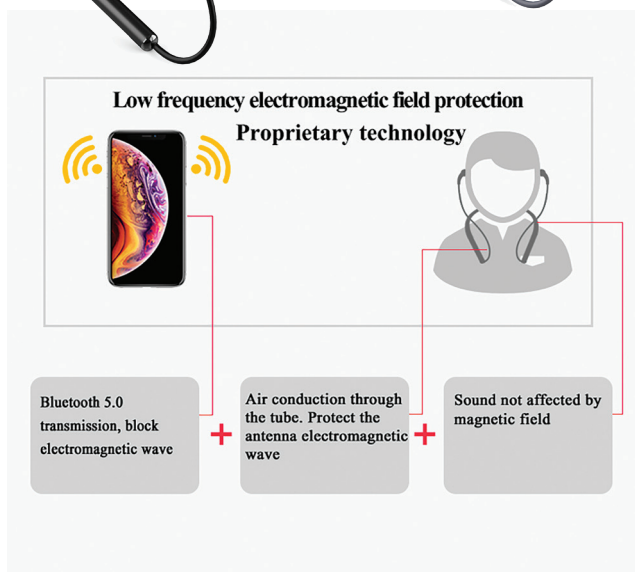

Air conduction tube electromagnetic wave blocking

The Air Tube headset cuts off the electromagnetic waves. High elasticity, high strength, high-quality silicone air tube 'air conduit' is used.

The Air Tube Wireless Bluetooth headset is available in four colours - black, grey, yellow and red.

High-quality silicone air tube

Display real-time remaining battery capacity on iOS and Android systems
